EDUCATION

- 2024**
Angular certification
Angular Training
- 2021**
Java certification
M2i Formation — Java conversion programme
- 2017 — 2021**
Engineering degree & MSc in Aerospace
ISAE-ENSMA, Poitiers — dual degree

LANGUAGES

French Native speaker

English C1 — TOEIC 945/990
Cambridge First Certificate

4 months in Sweden at KTH
Stockholm, working and living entirely in English.

INTERESTS

Ju-jitsu — green belt Fitness

Ukulele Travel

Profile

An aerospace engineer turned developer, I have spent **5 years** building business applications in **Angular and Java** for major French public-sector bodies: the Ministry of the Armed Forces, then the Directorate General for Maritime Affairs, Fisheries and Aquaculture (DGAMPA). I work in heavily regulated domains, where a mistranslated business rule has concrete consequences and where code quality is judged over the long run. As frontend referent, I spend as much time reviewing, unblocking and explaining as I do writing code.

Professional experience

Senior Full-Stack Developer

May 2026 — Present

Open, Rennes · client **DGAMPA**

Complete rebuild of the **aquaculture land registry** management tool, in Angular and Java.

- Adoption of the **DSFR**, the French State Design System, as the interface foundation.
- RGAA** accessibility compliance targeted across the whole scope, apart from the mapping section.
- Picked the maritime business domain straight back up from the previous assignment, with no ramp-up time.

Senior Full-Stack Developer

Nov. 2024 — Apr. 2026

Capgemini, Rennes · client **DGAMPA**

A year and a half on the **pleasure-craft** management applications. A regulated domain where every business rule carries legal weight.

- Design and evolution of several pleasure-craft management web applications.
- Full development of the **2026 taxation scheme**: translating a new regulatory scale into calculation rules, a data model, and data-entry and control interfaces.
- Corrective and evolutive maintenance on a portfolio of applications in production, in daily contact with business users.
- Continuous performance improvement**: identifying expensive queries, revising fetching strategies.
- Mentoring an **apprentice** and supporting the team's junior developers.

Talend

Full-Stack Developer

Jul. 2021 — Oct. 2024

Sopra Steria, Paris then Rennes · client **French Ministry of the Armed Forces**

3 years and 4 months across two successive assignments, with responsibility growing steadily up to the **frontend referent** role.

Full-Stack development — Jan. 2023 to Oct. 2024

Web application for managing the maintenance of **military ground vehicles**, from design through to operational upkeep. Angular, Java / Spring Boot, Oracle.

Data integration — Jul. 2021 to Dec. 2022

Talend integration flows on **military aircraft** data: migrations, transformations and consistency checks on substantial volumes. Java, PostgreSQL, Talend.

- Frontend referent**: architecture decisions, conventions, systematic review of the team's work.
- Leading a team of 2 developers** to meet the milestones committed to the client, and mentoring an intern.
- Gradual ramp-up on the Java / Spring back end, until covering the full chain.

TOOLS & METHODS

ENGINEERING STRENGTHS

- **The rigour of calculation**
Check the assumptions before building on them.
- **Systems thinking**
Break down, isolate, test each part.
- **A taste for unfamiliar problems**
Absorb an unknown business domain quickly.

<> Personal projects

I design, deploy and maintain useful everyday web applications on my own. They are my testing ground for new Angular features before I propose them on an assignment, and a chance to tackle subjects you do not always meet as a contractor: GDPR, European hosting, encryption.

Life Rise 2025 — 2026

LIVE

All of daily life in a single application: **19 management spaces** (meals, fitness, finances, tasks, inventory, travel) tied together by a **conversational assistant** able to create, edit and delete after confirmation. Up to 6 profiles per account with selective sharing, real-time messaging, and an **IndexedDB cache** for offline use.

Angular TypeScript RxJS Firebase Firestore IndexedDB Generative AI Stripe

Game Time 2024

LIVE

Three puzzle games playable together in a single session — word guessing, flags, brands — with lobbies, a **synchronised countdown** and a live leaderboard.

Angular TypeScript RxJS Angular Material Firebase

Pick Me 2023 — 2024

ARCHIVED

A dating application built from scratch, **front and back**: profiles, preferences, a mutual matching system and messaging, on a Java / Spring Boot API and a relational database.

Angular TypeScript RxJS Java Spring Boot PostgreSQL

Renovation grant simulator 2023

LIVE

A simulator for energy renovation grants, written in **2 days** to help out an acquaintance who needed it for their apprenticeship project.

Angular TypeScript

My portfolio 2026

LIVE

A technical showcase that applies to itself what it advocates: **prerendered** pages, change detection **without Zone.js**, bilingual content and accessibility handled from the design stage.

Angular 21 TypeScript SSR / Prerendering Zoneless Firebase Hosting

How I can help

Taking over and evolving an existing system

The heart of my last 5 years: learn the business rules before touching them, ship without breaking what runs.

Getting performance back under control

Bundle and lazy loading, move to OnPush, expensive database queries, SSR where it makes sense.

Building a business application from scratch

Domain-driven Angular architecture, Spring Boot REST API, first screens in production over a perfect mock-up.

Bringing a public application into compliance

Keyboard journeys, semantic structure and ARIA roles, contrast, integration of the French State Design System.

What guides my work

Readability over cleverness

Code read without effort beats elegance nobody dares to touch.

Accessibility is not optional

On public-sector projects, it is handled from the first commit, not during acceptance testing.

AI accelerates, it does not sign

Targeted prompts, minimal context. Shipped code is still reviewed, understood and owned line by line.

Performance is measured

Wasted time is profiled, not guessed at.

The domain before the technology

Turning a regulatory scale into a data model means understanding the rule first.

Passing it on is part of the job

Explaining a technical choice forces you to clarify it: the team gains, and so does whoever explains.
